

Alternative Filters for the Wind Turbine Industry

HYDRAULICS

DESCRIPTION

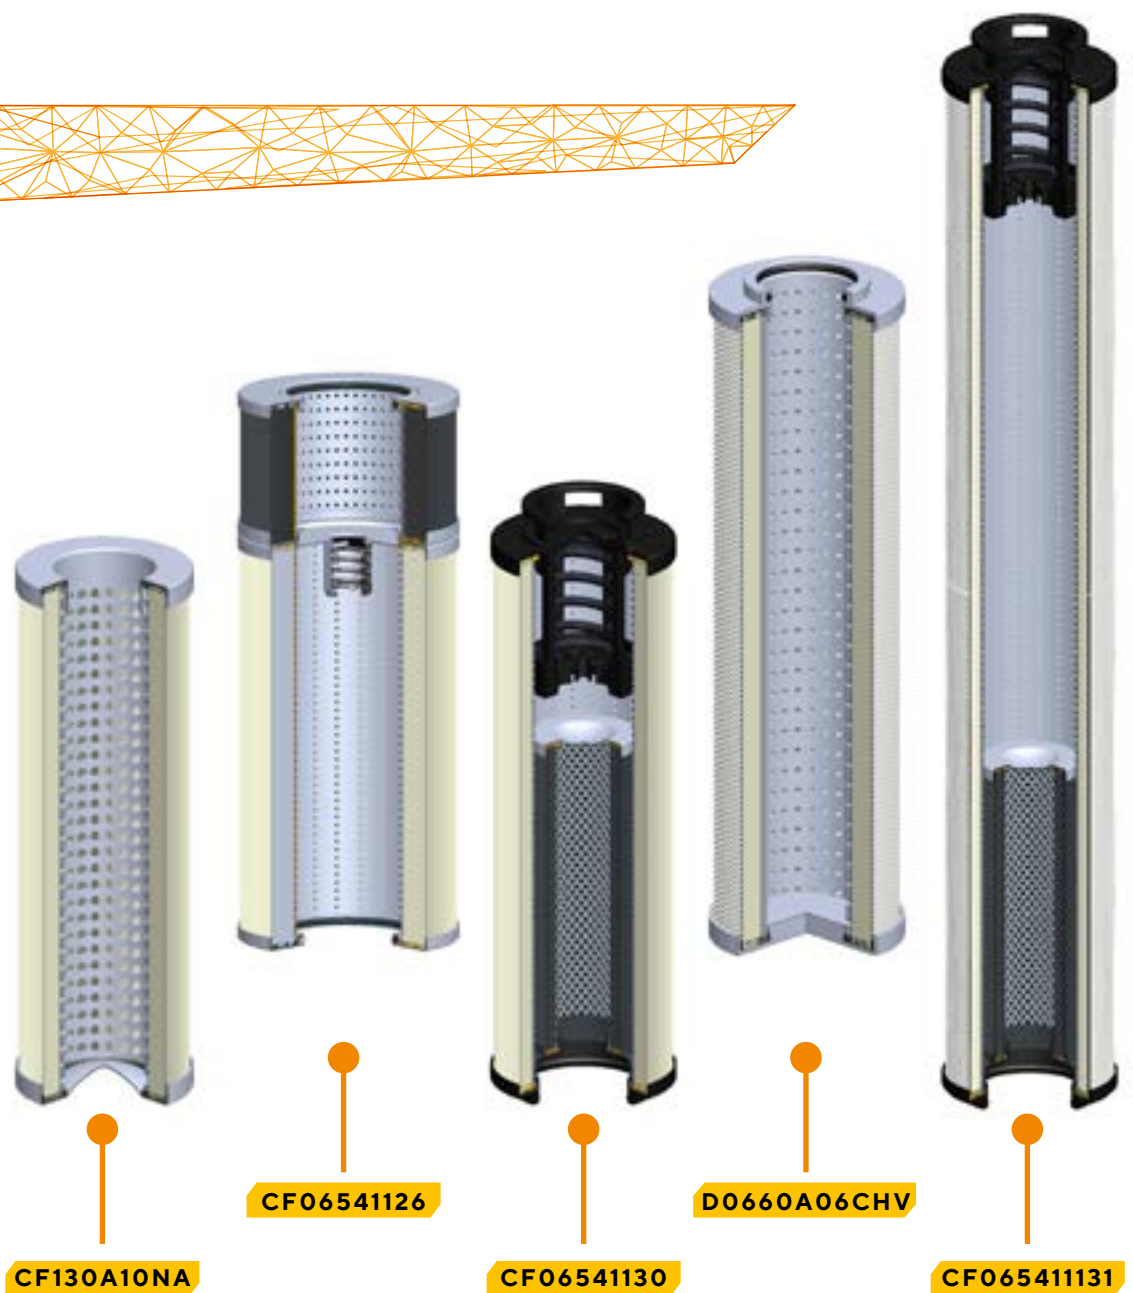

Fai Filtri has unveiled a specialized range of **alternative** filter elements dedicated to the wind turbine **industry**.

Material wear in turbines, which can be caused by varying environmental conditions, can create small particles that ultimately contaminate the oil.

Our oil filters, which are mounted on gearboxes, play an important role in cleaning and maintaining the hydraulic system, resulting in safer conditions and better performance.

Thanks to our R&D department and decades of experience in filtration systems, Fai Filtri filters allow for optimal performance, while also helping to preserve gearboxes and the turbines themselves.

For our customers, this means cost reduction, better wind energy optimization, and a healthier environment.

MAIN APPLICATIONS

OEM Codes	Description	FAI FILTRI Codes
